Juniorclassic

The flexible entry model

- Can be used anywhere: both indoors and outdoors
- Fast evaluation: hit evaluation directly above the target box
- Easy handling: in contrast to traditional installations no PC or software required
- Absolutely safe: infrared light only (no laser!) – therefore not subject to the gun control law
- No age limit
- No license required
- For any event – not only within a club
- Training of concentration and the proper handling of a rifle

Technical data:

- Weight: 2,3 kg
- Mounting: left-hand, right-hand stock, from plastic
- Targeting: rear sight and front sight
- Trigger: with pressure point
- Distance: 4 to 6 m
- Evaluation: accurate evaluation of the rings 10 to 8.
- In addition, hits in ring 7 are shown

Included in delivery:

rifle with rear sight and front sight, target box with rechargeable battery, mains adapter, batteries and case

Juniorplus

The ingenious competition-version

The range of use is the same as the Junior Classic, but in addition to the higher quality type of the IROSA Junior - such as the sights with pro-diopter and grain Tunnel - Junior Plus offers the opportunity to connect the target box to a computer.

Technical data:

- Weight: 2,3 kg
- Targeting: professional diopter and front target sight with plexiglass
- Mounting: ergonomic left-hand, right-hand stock, from superior beech lumber-core plywood
- Trigger: with pressure point
- Distance: 5 to 10 m
- Version: Competition version with a handstop rail and a handstop for the triple-position match

Included in delivery:

Rifle, target box with rechargeable battery, mains adapter, batteries, professional diopter, target sight, handstop rail, handstop and case

Optional accessories:

stand, stock extension, data cable and software

Now: with new biathlon-mode.

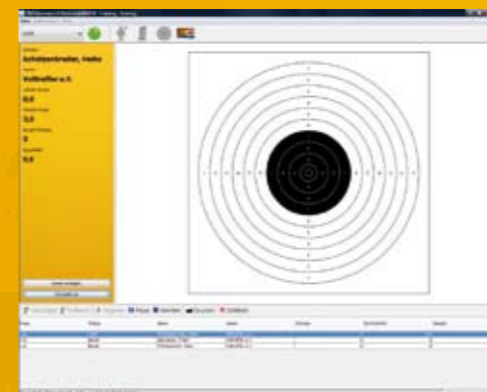

IROSAconnect

Extra software for a simple evaluation

- RS-232 interface for connecting to a PC
- In addition to evaluation through a target box, a hit evaluation is also possible through a PC
- Saving and administration of results
- Saving and administration of shooters and teams
- Printout of the result list
- Individual configuration of the target box
- Exact evaluation of the rings 1 to 10.9 (only ProFlash)

Included in delivery:

15 m connection cable, software

PROFline

That's how target shooters get a step closer to the Olympics – with consistent transitional ballistics through professional compensator Ti600 from IROSA!

The compensator Ti600 absorbs the air twirls in front and behind the projectile during discharge from the gun barrel.

The bullet is no longer subject to air and gas turbulence which leads to a more stable ballistic trajectory of the projectile.

The measured circular error probability is reduced by up to 80% (measured with the weapon secured).

› For SCHUSSBILDER see: www.irosa.de

The compensator has to coordinated exactly with the weapon and the ammunition used .

The Ti600 fits on allmost evrey free pistols.

Technical data:

- Titanium and high-strength aluminium with a
- tolerance range of 5/1,000 mm
- Black or gold anodizing
- Only 138 g
